

TKK-2Y

THERMOSTATIC STEAM TRAP

GENERAL FEATURES

TKK-2Y 's capsule follows the steam curves with constantly and it helps to drain condensate and non condensable gases. The resistance of the thermostatic trap, which is not affected by the water hammer, is also highly resistant to corrosion.

The only difference from the other Ayvaz thermostatic trap in the TKK-2Y type is that the strainer is of type "Y". The "Y" type of trapped traps are made of forged steel and the other inner part is stainless steel, providing cleanliness for many applications. Like all thermostatic traps, the TKK-2Y product also includes one of three different capsules, depending on application conditions.

"S" type capsules are used in standard productions. The entire trap can be supplied as a spare part. At the same time, the ball inside the seat acts as a check valve at the high back pressure in the system, preventing the condensate from mixing into the steam line.

TKK-2Y Thermostatic Traps can be connected to the pipeline in every position for efficient and long-term operation. Proper isolation valves must be installed to ensure the maintenance and replacement of the trap is safe.

Proper isolation valves must be installed to ensure the maintenance and replacement of the trap is safe.

Product Material:

Body and Cover: Forged Steel
Inner Parts: AISI 304 Stainless Steel

Connection:

Threaded, Welding End, Socket and Flanged

Nominal Diameter:

DN15 (1/2") - DN25 (1")

Pressure Value:

Max. 32 bar

Working Temperature:

Max. Working Temperature 250 °C

Applications:

- Tracing Line
- Drying Units
- Pressing Units
- Steam Jacket Pipes
- Irons

Installation:

The thermostatic trap, which can work in every position, can be connected to the pipeline at every position.

Red Chart

Steam saturation temperature max. 10 ° C below the condensate drain;

Blue Chart

Cold condensate drain at 20 ° C

TECHNICAL SPECIFICATIONS
